## Claims:

## What is claimed is:

1. A mattress for a bed having a frame for supporting the mattress and siderails, including:

a non-puncture resistant cover having an interior surface; and

- a core disposed adjacent the interior surface including a body defining a plurality of mounting locations, the core further including a plurality of self-sealing gas containers respectively disposed within the plurality of mounting locations.
- 2. The mattress of claim 1 wherein each mounting location includes an enclosure.
- 3. The mattress of claim 2 wherein each enclosure provides a substantially cylindrical space for receiving a respective container.
- 4. The mattress of claim 1 wherein the body is formed of substantially non-stretchable material.
- 5. The mattress of claim 4 wherein the substantially non-stretchable material is one of substantially non-stretchable fabric and substantially non-stretchable film.
- 6. The mattress of claim 1 wherein the body is formed of woven nylon twill.
- 7. The mattress of claim 1 wherein the cover defines an interior space bounded by the interior surface, the core being disposed substantially within the interior space.
- 8. The mattress of claim 1 wherein the containers are substantially cylindrical.
- 9. The mattress of claim 1 wherein the body includes an upper layer and a lower layer, the upper and lower layers being connected at a plurality of seams, thereby forming substantially cylindrical spaces for receiving the plurality of containers.
- 10. The mattress of claim 9 wherein the plurality of seams are substantially parallel to one another.
- 11. The mattress of claim 1 wherein the containers are connected to a connected to a gas source.
- 12. The mattress of claim 1 wherein the cover includes a sleep surface opposite the interior surface.
- 13. The mattress of claim 1 wherein the siderails have a minimum height above a sleep surface of the cover, and the core has a height, substantially all of the core height being occupied by the plurality of containers.

- 14. The mattress of claim 1 wherein one of the containers is pressurized to a first pressure and another of the containers is pressurized to a second pressure that is different from the first pressure.
- 15. A mattress for a bed having a frame for supporting the mattress and siderails, including:
  - a non-puncture resistant cover defining having an interior surface; and
- a core disposed adjacent the interior surface including a plurality of enclosures, each enclosure including a self-sealing lining.
- 16. The mattress of claim 15 wherein each enclosure defines a substantially cylindrical space.
- 17. The mattress of claim 15 wherein the plurality of enclosures are formed of substantially non-stretchable material.
- 18. The mattress of claim 17 wherein the substantially non-stretchable material is one of substantially non-stretchable fabric and substantially non-stretchable film.
- 19. The mattress of claim 15 wherein the plurality of enclosures are formed of woven nylon twill.
- 20. The mattress of claim 15 wherein the cover defines an interior space bounded by the interior surface, the core being disposed substantially within the interior space.
- 21. The mattress of claim 15 wherein the body includes an upper layer and a lower layer, the upper and lower layers being connected at a plurality of seams, thereby forming the plurality of enclosures.
- 22. The mattress of claim 21 wherein the plurality of seams are substantially parallel to one another.
- 23. The mattress of claim 15 wherein the plurality of enclosures are connected to a gas source, the gas source pressurizing the enclosures with a gas.
- 24. The mattress of claim 23 wherein one of the plurality of enclosures is pressurized to a first pressure and another of the plurality of enclosures is pressurized to a second pressure that is different from the first pressure.
- 25. The mattress of claim 15 wherein the cover includes a sleep surface opposite the interior surface.
- 26. The mattress of claim 25 wherein the siderails have a minimum height above the cover sleep surface, thereby defining a maximum height of the core, substantially all of the maximum core height being occupied by the plurality of enclosures.

## 27. A mattress, including:

means for defining a core including a plurality of sealed enclosures containing a gas; and

means for automatically re-sealing a puncture in any of the plurality of enclosures to prevent the gas from being released.
